Serious, non-fatal injuries cost $189.81 million a week in the construction industry.

Did you know: Liberty Mutual SafetyNet™ has sophisticated technical resources to help prevent falls to lower level, struck by object or equipment, and many other construction exposures. When it comes to managing risk in the workplace, knowledge is power.

Scientific methodology: The Liberty Mutual Workplace Safety Indices are based on 2016 data from Liberty Mutual, the U.S. Bureau of Labor Statistics (BLS), and the National Academy of Social Insurance. BLS non-fatal injury data are analyzed to determine which events caused employees to miss more than five days of work, and then rank those events by total workers compensation costs.

Note: The underlying causes of falls on same level, and slip or trip without a fall, are likely similar and combining these categories would be the second-highest cost driver, above struck by object or equipment.
